Knobs

Paramount Panels offer an extensive range of control knobs, which are primarily used in aerospace knob and defence knob applications. Moulded in clear plastic and coated with special paints to match the panel finish and allow constant handling with minimal signs of wear.

Light transference or “trans-luminance” to the knob beak is normally achieved by a clear area located on the front face of the overlay of an integrally lit information panel.

Options within our range include overall finish colour, “beak” marking, round and “D” flat shaft inserts, Locking set screw positions, counter-bores and indicia markings on the crown of the knobs.

We also offer a range of knobs for use on our concentric dimmers, dial options, metal knobs and non-illuminated plastic versions.

Our in house design and manufacturing facilities allows us to keep cost minimal, and we welcome custom design drawings even for small quantity requirements.

Information and drawings are available on request
